Facebook and Instagram

Tdap vaccine protects against three serious diseases: tetanus, diphtheria and pertussis (whooping cough).

Tetanus is a potentially deadly infection that causes painful muscle stiffness and lockjaw.

Diphtheria is a serious infection that causes a thick covering in the back of the nose or throat. It can lead to difficulty breathing, heart failure, paralysis, and even death.

Whooping cough, or pertussis, is a highly contagious disease known for uncontrollable, violent coughing that often makes it hard to breathe.

Vaccines are required for pre-school & school enrollment in Illinois. Take action to protect your child today! Call 618-233-6170 to make an appointment

Facebook and Instagram

Measles, mumps, rubella (MMR) vaccine protects your child against these three serious diseases.

The measles virus can cause a high fever, a distinctive rash, cough, runny nose, and red eyes. Sometimes, it can also cause diarrhea and ear infection. It can also lead to pneumonia (infection in the lungs), brain damage, deafness, and death.

Mumps typically start with a fever, headache, muscle aches, tiredness, and loss of appetite. Then, a child's salivary glands swell, which causes puffy cheeks and a swollen jaw. Mumps is pretty mild in most children but can sometimes cause lasting problems, such as deafness, meningitis (infection of the covering around the brain and spinal cord), and swelling of the brain, testicles, ovaries, or breasts.

Rubella may cause a rash or fever, but many children have no symptoms. Infected children can spread rubella to pregnant women.

Vaccines are required for pre-school & school enrollment in Illinois. Take action to protect your child today! Call 618-233-6170 to make an appointment
